

Fair Shares

Adam and Brian run a small business, and split any money they make **fairly** between them.
This week they both worked on a job for which they were paid £600.

- Adam worked on Monday, Tuesday and Wednesday.
- Brian worked on Thursday and Friday.

How much of the money should each person receive?

How can you check if this is fair?

Adam and Brian run a small business, and split any money they make **fairly** between them.
This week they both worked on a job for which they were paid £600.

- Adam worked on Monday, Tuesday and Wednesday.
- Brian worked on Thursday and Friday.

How much of the money should each person receive?

Money earned per day: $600 \div 5 = \text{£}120$, so they earned £120 per day.

Adam worked 3 days: £360, Brian worked 2 days: £240

How can you check if this is fair?

They should earn the same amount for each day of work.
