

The journey

I am sitting on a bench 100m from my house.

After a minute I remember I left the oven on.

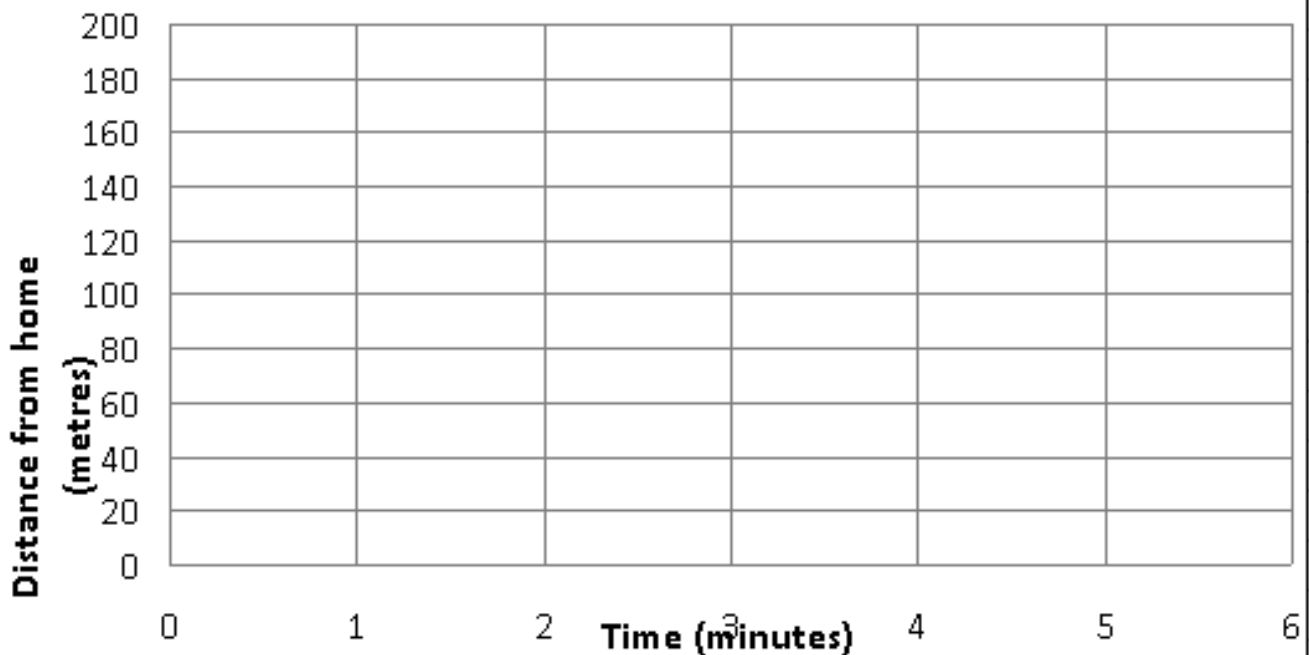

I run home (this takes me half a minute)

I turn off the oven (this takes me 1 minute),

then walk back to the bench (this takes me 2 minutes),

and remain there.

Draw the graph

Time (min)	0	1	1.5	2.5	4.5	6
Distance (m)						

*Use the table to help you – How far from the house am I at 0 minutes? At 1 minute? etc...
Then plot the points and join them up.*
