

Write these numbers as a product of their prime factors:

<p>Eg:</p> <p>$280 = 2 \times 2 \times 2 \times 5 \times 7$</p> 	<p>1</p> <p>45</p>
<p>2</p> <p>120</p>	<p>3</p> <p>630</p>
<p>4</p> <p>182</p>	<p>5</p> <p>600</p>

Remember: If a number ends in a 0, it divides by 10, if it ends in an even digit it divides by 2, if it ends in a 5 or a 0 it divides by 5 and if the digits add up to a multiple of 3, it divides by 3.

A prime has **exactly** two factors. The first 10 prime numbers are: 2 3 5 7 11 13 17 19 23 29

Product of their prime factors SOLUTIONS:

<p>Eg:</p> $280 = 2 \times 2 \times 2 \times 5 \times 7$ 	<p>1</p> $45 = 3^2 \times 5$
<p>2</p> $120 = 2^3 \times 3 \times 5$	<p>3</p> $630 = 2 \times 3^2 \times 5 \times 7$
<p>4</p> $182 = 2 \times 7 \times 13$	<p>5</p> $600 = 2^3 \times 3 \times 5^2$

Remember: If a number ends in a 0, it divides by 10, if it ends in an even digit it divides by 2, if it ends in a 5 or a 0 it divides by 5 and if the digits add up to a multiple of 3, it divides by 3.

A prime has **exactly** two factors. The first 10 prime numbers are: 2 3 5 7 11 13 17 19 23 29
